NEW Buffalo Key Lock Switches

BUSW Key Lock Switch Series comes as standard in various current and phase configurations and features a lock-off function, indicated by the K1 code at the end of the product code.

When the key is removed in the OFF position, the switch locks to prevent unintentional operation. These switches also include an overriding padlock-off facility, consistent with the standard Buffalo range.

In addition to the K1 model, the range includes a K2 variant that allows the key to be removed in either the on or off position, preventing unintentional operation.

To change modes, the key must be inserted.

The key switch system uses barrels for either common key systems or random configurations, depending on requirements.

These specifications must be provided when ordering through the Customer Service Team. Special key combinations may have longer lead times.
