

LEOPARD

Leopard **Switches & Sockets**

The Slim Range

The Leopard - Australia's easy to install range of slim switches and sockets designed in Australia by Australians for Australian Electrical Contractors.

LEOPARD

The Leopard has arrived from Trader, our Slim range of switches and sockets is ready for use by Australian Electrical Contractors.

Exciting Features of the Leopard Range

- · Fits standard mounting accessories and screw mounting area is not recessed, and therefore quicker and easier compared to other Slim products on the market, which in turn saves time and achieves the slim look for the consumer.
- The Leopard has "Green" indicators which we have named the "Cat's Eye Dolly".
- Installers can see quality working parts in the translucent green material used on base moulding.
- Terminals are large and in line for ease of installation.
- Dolly's are positioned out to the side like a conventional powerpoint whereas other Slim products have them located in the middle.
- Flush covers are made from Polycarbonate (Not ABS) which means cover plates do not discolour.
- All Trader switches and sockets are made from 100% virgin Polycarbonate.
- The leading switch mechanism on the market "The Claw Mech" 16AX/20A - Ideal for all fluoro applications and means you don't have to carry different rated switches for different applications.
- To achieve the Slim look and to fit with standard mounting accessories we have introduced "Cat Flaps". The Contractor is required to push these in place before attaching the cover plate (See Instructions in box for detail).
- Products are fully certified and compliant with Australian standards.
- Robust terminals with plenty of wiring space.
- Switch plates can accommodate other clip in Trader modules or equivalents in the market.
- Straight top edge for easy alignment.
- Standard colour is white. Black and Brushed Aluminium also stocked. Please check availability.
