

# Electrical Solutions Marine Areas

Maximise the safety of staff and customers in marine areas with electrical solutions from Trader, Australia's fastest growing brand of switches, sockets and wiring accessories. We are local, Australian owned and represented in every state and territory.

## All weather performer

In exposed docking areas, Buffalo industrial switchgear offers full IP66 weatherproof performance, withstanding dust and water from heavy seas.

Appliance inlets are designed to fit various plug designs. Backboxes are fitted standard with O-rings on threaded entries to assist in sealing.

## Stay cold

When you have produce and perishables sitting in a refrigerated container, make sure the connection is safe and secure with our Buffalo IEC309 Socket.

Ideal whenever international plugs are used and especially for "Reefer" containers.

## Built to last

Warehouses can be a tough environment for electrical switchgear.

Our Buffalo industrial switchgear is made from heavy duty polycarbonate, designed to withstand impacts.

Should switch and outlet fascias get damaged, enclosure boxes, flap assemblies are available separately.

## Double Pole Solutions

Our Puma Vandal Proof & Hippo double pole power points are fully compliant with Australian Wiring Rules for portable installations and temporary offices.

Double Pole provides greater safety as appliances are isolated and the user is completely disconnected from the mains.

## Seasoned

Our Hippo isolators and surface switches are reinforced for extra strength to survive hard knocks.

The switch mechanism is designed to cope with highly inductive loads and full load current. Ideal for A/C units, HWS and pumps.

## Outlast, outshine

Standard zinc plated conduit saddles don't last in harsh environments. That's why we offer Hyena half saddles made from 316 marine grade stainless steel.

Designed to resist pitting and corrosion caused by the sun and salt air.

## Office connections

Make sure your office has all the power points, USB chargers and data you need to run an efficient workplace.

## Energy efficient sensors

Maximise lighting efficiencies with Owl Infrared Sensors.

These offer full 360 degree detection with an 8 metre radius.

## Energy smart outside

Our Owl Outdoor sensors offer a IP66 weather protection rating and are designed to withstand the elements.

The sensor lens covers a wide 110 degrees detection up to 18 metres.

## Energy smart

Powermesh smart switches and power points provide timers and sunset/sunrise schedules for lighting.

Power is never left on indefinitely saving energy and reducing power bills.
